Web Development Internship Report

Tanvi Varshney, Roll No-25scs1003004972 | Codec Technologies Pvt.
Ltd. | July–August 2026

About Codec Technologies

Global Reach

Operating across **27+ countries**, empowering learners and connecting diverse talent worldwide

Certified Excellence

ISO 9001:2015 certified and proud **Google for Education Partner**

Industry Programs

Delivers industry-level knowledge through immersive, hands-on internship programs

Internship Overview

Duration

1 Month | 02 July – 02 August
2026

Role

Web Developer Intern

Mode

Pan India, Hybrid

Focus

Full-stack web development —
front-end to deployment

Learning Areas Covered

Core Web Technologies

HTML, CSS, JavaScript and responsive design principles for modern web interfaces

APIs & Back-End Concepts

RESTful APIs, service integration, and back-end development fundamentals

Front-End Frameworks

Modern front-end development using **React.js** for dynamic, component-driven applications

Databases & Deployment

Working with databases, testing, debugging, and deploying web applications

Project: AI-Powered Recruitment ATS

A centralized web application that transforms the hiring process by automating resume processing, applying Natural Language Processing for skill matching, and organizing candidates through structured hiring pipeline stages — integrating AI, APIs, database management, and a recruiter-facing dashboard into a single unified platform.

Problem Statement

Manual Resume Review

Recruitment teams manually evaluate large volumes of resumes per open position

Fragmented Information

Candidate data scattered across multiple disconnected systems

Time-Consuming Ranking

Skill comparison and applicant prioritization done manually and inefficiently

No Centralized Workflow

Absence of a unified system to track candidates across hiring stages

Technology Stack

React.js

Interactive recruiter dashboard and all front-end screens

FastAPI

Application API layer and service coordination between modules

Python + NLP

Automated resume processing and intelligent skill extraction

PostgreSQL

Structured, reliable records for candidates and job listings

System Architecture

How the Layers Interact

01

Recruiter Interface

User accesses the dashboard and candidate records via React.js front-end

02

API Layer

FastAPI services receive requests, execute business operations, and coordinate responses

03

NLP Processing

Python module parses and extracts meaningful data from uploaded resumes

04

Data Persistence

PostgreSQL stores and retrieves all candidate and job records reliably

Key Project Components

Resume Processing

Automatically extract candidate details and skills from uploaded documents using NLP

Skill Matching

Intelligently compare candidate skill profiles against specific job requirements

Candidate Ranking

Algorithmically identify and surface the most relevant applicants for each role

Hiring Pipeline

Track and manage candidates through structured, transparent recruitment stages

Anticipated Outcomes

Centralized Information

A single, organized recruitment system consolidating all candidate and job data

Reduced Manual Effort

Significantly less time spent on manual resume review and skill-by-skill comparison

Stronger Profile–Job Alignment

Clearer, data-driven connection between candidate qualifications and role requirements

Pipeline Visibility

Improved real-time visibility of every applicant's progress through the hiring journey

THANKYOU
